Vision + appraisal model

Multi-agent

Price agent + eBay preflight

End-to-end

Snap → List → Manage

THE PROBLEM

Selling is hard, and most people give up.

No idea what it's worth

Researching comps across eBay, Facebook, and Poshmark takes 30+ minutes per item. Most sellers guess — and underprice every time.

Listing is tedious

At a 33% Sell-Through Rate, most items never end up selling. Writing titles, picking categories, filling out eBay's required item specifics — sellers give up halfway.

Management is time consuming

Invested sellers end up juggling listings and items across their house and computer. SnapSell brings this into one single app.

There are 2.3 Billion active eBay listings — yet the average eBay sell-through rate is just 33%, meaning 2 in 3 listings never sell. (Red Stag Fulfillment)

THE SOLUTION

One snap. Full market intelligence.

Stale listing repricing

★ THE DASHBOARD

The core experience: per-item appraisal card showing Low / Mean / High price bands, confidence %, comparable sale volume, a buy/haggle/pass decision badge with tooltip reasoning, and pre-filled eBay listing form with AI-resolved item specifics. One view, one click to list.

APPRAISAL MODAL

AI output → concrete advice → action.

WHAT YOU SEE

Valuation band	*Low / Mean / High price estimates*
Confidence + volume	*e.g. 82% confidence · 14 comps used*
Reasoning snippet	*Why the item is valued this way*
Decision badge	*Buy · Haggle · Pass · Not enough info*
Pre-filled listing form	*Title, description, price, condition*
eBay item specifics	*AI-drafted Brand, Size, Color, Material…*

DECISION BADGES

BUY	Comps are strong. Should sell at or near market rate.
HAGGLE	Appraised value exists but room to negotiate purchase price.
PASS	Demand low / oversaturated. Skip or price very aggressively.
NO INFO	Low confidence — needs_review flagged. Needs manual check before buy decision.

+ Comp table: source, name, price — paginated so users can sanity-check the AI.

DERIVATIVE FEATURES

More than a listing tool.

Rich Semantics

Leverage LLM semantic understanding

Our LLMs are equipped with memory and tools to both better search listing sources, and understand why items sell the way they do. This makes their insight incredibly valuable to appraising items by photo.

Robust Item Management

Dynamic Repricing

The repricing agent monitors listings for stale price (no changes for > 2 weeks). Calls /api/revise-listing → eBay's revise_item API. Updates last_price_change_date in Postgres to reset the staleness clock.

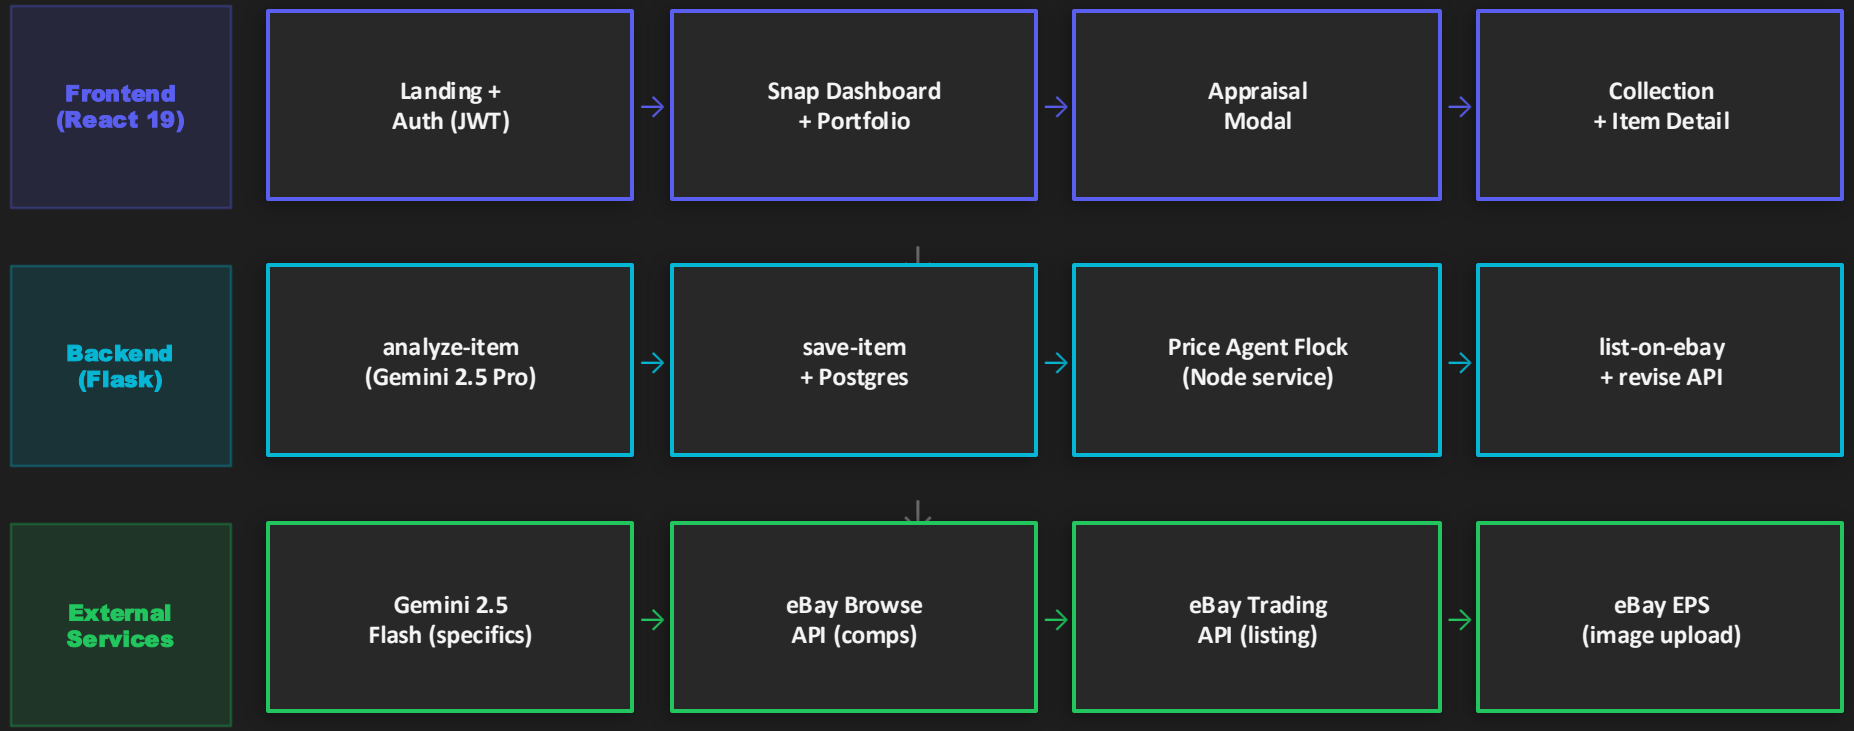
Autonomous Agents

Concurrent API Exploration

eBay silently rejects listings missing category-specific fields — and there are thousands of categories. We run category resolution, item specifics discovery, and image upload concurrently at save time. By the time you tap "List," everything's already resolved. Zero friction, zero rejected listings.

ARCHITECTURE

How it all connects.



RESULTS

It works. Here's the proof.

30 mins
Saved per post

67%
of eBay listings never sell

$74B
U.S. secondhand market 2025 (ThredUp)

10x
Faster than manual research

SnapSell transforms the experience of selling items, putting the power of robust agential work in your pocket (hopefully with some extra change)

Live Demo

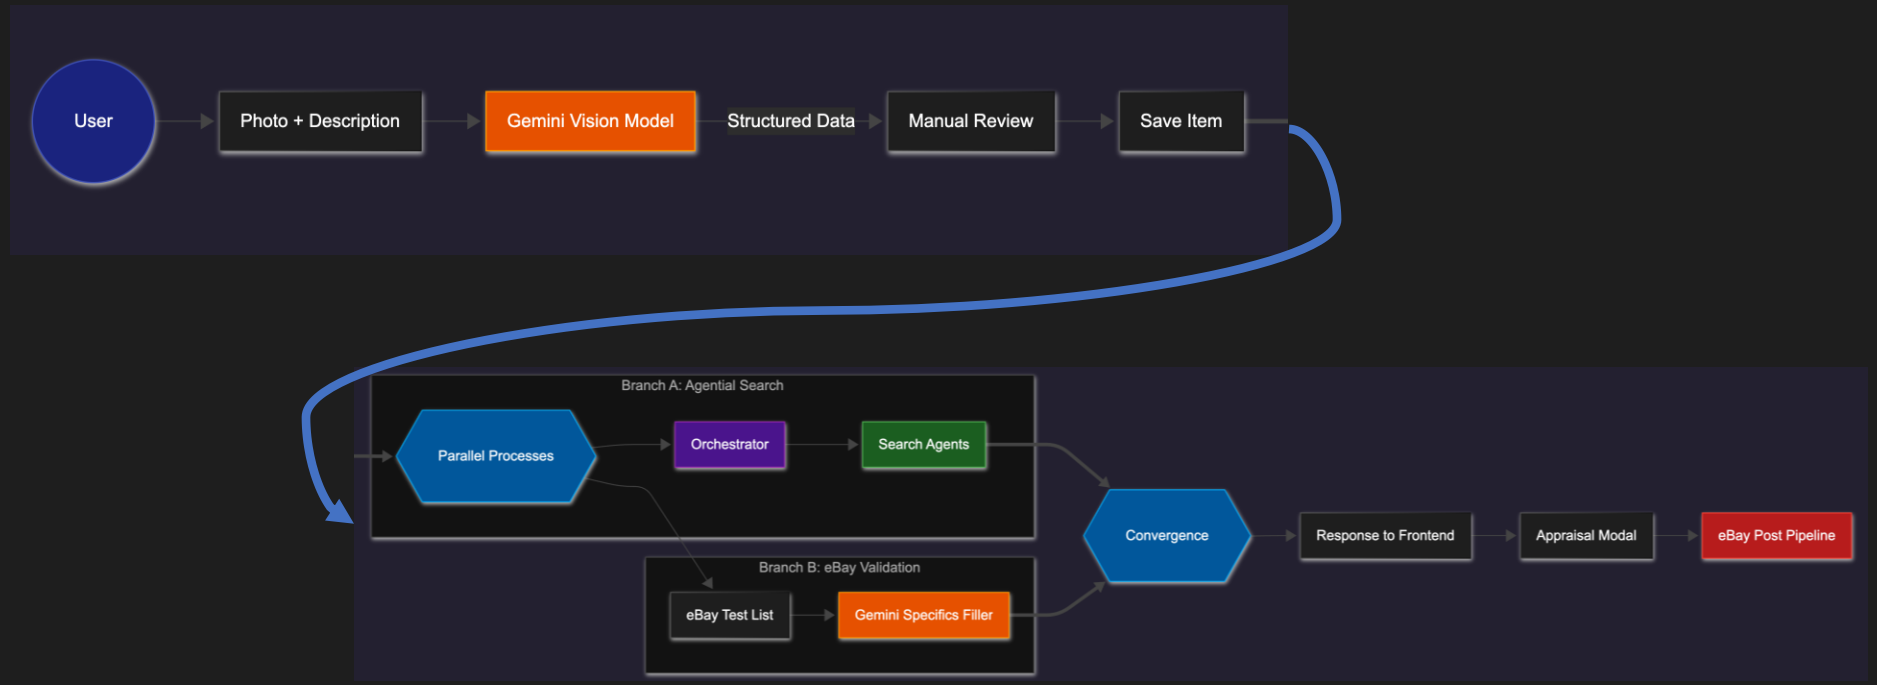
Let's see SnapSell in action.

- 📸 Snap an item → Gemini 2.5 Pro identifies it in seconds
- 📊 Appraisal modal — Low/Mean/High + Buy/Haggle/Pass decision
- 🚀 One-tap eBay listing with category + item specifics resolved by AI

TECH STACK

Architecture, at a glance

Agent Flock Architecture



SnapSell

The fastest way from garage sale to sold.

- Snap any item
- Gemini 2.5 Pro appraises it instantly
- List. Sell. Repeat.
